Classification of Urban Resource Centres finalized

04

Promote Urban Resource Centres for waste prevention, re-use and recycling

To enable the transition to a circular economy, there needs to be a stronger focus on waste prevention, re-use and recycling in local waste management. Cities should make it easier to reduce waste and develop more sustainable consumption patterns. This action aims to facilitate this through the establishment of Urban Resources Centres – physical centres that enable sustainable consumption within a city, provide education on waste prevention and facilitate re-use, repair and recycling. This will be done through a report investigating their potential, enabling peer-to-peer exchange, and providing information on alternative forms of funding.
